Your Hero

HERO ATTRIBUTES Your hero has several different attributes that will define him/her as can be seen below:

Name When you create your hero you must decide on a name, which can contain any combination of letters and numbers. Note that each hero name in the game must be unique so you must choose a name that had not already been taken by another player!

Gender Your hero can be either female or male – you are given the choice when you create your hero. Note that sex/gender has no effect on how your hero performs in the game!

ABILITIES Your hero has six different Abilities that each has an impact on how your hero performs both inside and outside of the Arena. Each ability score has a starting value of 5 but they will quickly get higher as your hero advances in levels (see below). The abilities and what they influence is listed below.

Strength (St) Strength is the first of the six Abilities and will influence the amount of damage dealt by melee weapons. Some skills, spells and items require certain St ability scores to be used. The movement and attack speed of a hero wearing armour and other heavy items is positively affected by St.

Dexterity (D) Dexterity influences your hero's talent for avoiding being hit by attacks; some skills, spells and items require higher D ability scores to be used; D is also used to determine how good a hero is at hitting a target;

Intelligence (I) Intelligence affects how well a hero casts and resists spells; I affects the damage potential of Pain spells. Some skills, spells and items require higher I ability scores to be used.

Speed (Sp) Speed affects all actions that a hero may perform. Some skills, spells and items require higher Sp ability scores to be used.

Toughness (T) Toughness is basically an indicator of how many Life Points (LP) your hero has. Some skills, spells and items require higher T ability scores to be used.

Charisma (C)	Charisma has an influence on how much your hero must pay when acquiring new spells, skills and items – a high C will reduce the cost. Some skills, spells and items require higher C ability scores to be used.
Level	Your hero starts at level 0 and will gradually gain higher levels. There are 49 levels in the game and each time your hero gains a level he/she is rewarded with 4 ability points that are used to raise ability scores (see above). Note that ability scores will increase faster at low values than at high values!
Level% (L%)	This is an indication on how close your hero is to gaining a new level. L% is earned when fighting in the arena and the amount depends on how challenging opponents are. L% is earned even if your hero loses a fight but the gain is not as high, of course! L% can never be lost.
Life Points (LP)	Life Points are a measurement on how much damage tour hero can take before losing a fight. Whenever a hero reaches 0 LP he/she loses the fight. Note that LP are fully regenerated after each fight! LP are directly connected to the Toughness Ability (see below).
Weight	Weight is an indicator of how much your hero is carrying in terms of equipment (weapons, armour and shields). Of course, some items of a given type are heavier than others. The more weight your hero is carrying the slower he/she will move in the fights.
Respect	Respect is an indicator of how well your hero performs in the arena fights. The better the score the better your hero has fought. Note that respect can be won AND lost, depending on whether you win or lose fights and on how challenging opponents are. E.g. if you defeat an opponent with a higher respect value you will gain more respect than if you defeat an opponent with a lower respect value.
Social	An important part of the game is the interaction with other players. The Social value will give you an idea of how known your hero is and is based on how many friend lists he/she is on. Friend lists are described in detail below!
Title	Each skill and spell your hero knows has a number of titles tied to them that indicate how good he/she is at using them. The titles are as follows:
Fumbler	This is the most basic level a hero can have in a skill or spell
Beginner	-
Trained	-
Experienced	-
Master	-
Expert	-
Sensei	When your hero obtains this title he/she can't advance any further with that particular skill or spell.
Promotion% (P%)	This is an indicator in percent of how close your hero is to reaching the next title with a skill or spell.
Gold	Gold is the monetary value of the game and may be used for buying items, skills and spells. You can earn gold in fights and participating in the events that take place on a regular basis.
Clan	If your hero has joined (or created) a clan this will be indicated by a Clan name. Clans will be described in further detail below.

Respect Rank (RR) You can see how well your hero is doing (in terms of respect) compared to all other heroes by looking at this value. The lower the value the better rank your hero has.

Social rank (SR) Just like with RR this will give an idea of how well you hero is doing in terms of social status.

Level Rank (LR) This is an indicator of what rank your hero has compared to all heroes of the same level. The hero with the highest respect on a given level has the best LR

Skills

WHAT ARE SKILLS? Skills cover a broad group of actions that your hero can make during fights. Skills are divided into 4 categories, which are described below:

Move All skills that are related to moving your hero around in the arena and removing traps (see the traps will be explained under weapons) fall into this category. Your hero starts with the most basic move skills, but more advanced skills will quickly be available as the hero improves.

Melee Whenever you wish to make an attack with a melee weapon or place a trap you must use a melee skill. Your hero starts with the most basic move skills, but more advanced skills will quickly be available as the hero improves.

Missile Missile skills allow your hero to make missile attacks, including throwing bombs. Your hero starts with the most basic move skills, but more advanced skills will quickly be available as the hero improves.

Defence Defence skills will improve your hero's chances of avoiding getting hit by physical attacks. Your hero starts with the most basic move skills, but more advanced skills will quickly be available as the hero improves.

SKILL CHARACTERISTICS Below are some characteristics that define skills:

Name This is the name of the skill.

Description The description of a skill will tell you what the skill does and how it is used.

Ability requirement(s) Some skills may have requirements to ability scores and this is listed with the relevant ability followed by a number (e.g. St 15 meaning that your hero must meet a requirement of Strength 15). Your hero must have that score in the listed ability in order to buy and use the skill.

Time (Ti) All skills take a certain amount of time to perform and this is indicated by the Ti value. Note that this is not the total time used if weapons or shields are used in combination with the skill.

Effect The effect of a skill indicates how powerful the skill is and is directly related to the description. For instance a skill description will say that the skill is used for making a dodge (a defence skill) and the effect value will then tell you how good that skill is. The higher the effect the better the skill is.

Spells

WHAT ARE SPELLS? Spells are mental manifestations that may give your hero the power to affect himself/herself and/or opponents. Although similar to skills spells never require the use of weapons or other items to be used. All spells fall into one of the following categories:

Mystic This category includes a wide variety of spells, including move related spells.

Pain The spells in this category all cause damage in some way or another.

Protect Protect spells will help your hero to avoid attacks, reduce damage taken and even reflect spells back at an opponent.

Bless The spells in this category are used to improve abilities and copy an opponent's spells/skills.

Curse The curse category includes spells that are meant to hamper your opponent in some way, including slowing him/her down.

SPELL RULES Spells follow certain "rules", which are listed below:

Resisting Spells can be resisted by an opposing hero even if the spell would not directly affect the other hero.

Always cast Spells count as always being cast (unless resisted of course!), and will not fizzle because your hero has been hit.

Always hit Pain spells always hit unlike melee and missile attack skills.

Armour and shields Armour and shields have no effect on spells - they simply ignore such mundane items.

Use of hands Spells are cast through the use of your hero's mind and therefore don't require the use of hands.

Line of Sight (LoS) All spells, except movement spells, that has the opponent as target require line of sight. LoS may be blocked by obstacles that are placed in the arena.

SPELL CHARACTERISTICS Spells have the same characteristics as skills (see above).

Items

ITEM CATEGORIES The items of the game will play an important role in improving your hero's chances of winning fights. Items are divided into the following categories:

Weapons There are many weapons in the game and they are all divided into the following categories and classes:

MELEE Melee weapons are those used in close combat and as a result all melee weapons have a range of 1, meaning that in order to hit an opponent the 2 heroes must be in contact with each other. Some melee weapons only require the use of 1 hand and will thus allow your hero to use a shield at the same time. Your hero cannot use a shield and a two-handed weapon at the same time. All melee weapons require LoS.

Sword	The sword is the most common type of melee weapon in Era of Eidolon. Your hero starts with the most basic sword as a default, but more powerful weapons from all classes will become available as you hero advances. Swords often require high I ability scores. Swords are generally fast weapons but don't cause as much damage as axes and hammers.
Axe	Axes are somewhat of a blend between swords and hammers in terms of damage potential and speed. Axes often require high D ability scores.
Hammer	Hammers are brutal melee weapons, which often require high St ability scores. Because hammers are so unwieldy they are slow to use but as compensation they generally have the highest damage potential.
MISSILE	All missile weapons have a range of 5, meaning that they can affect an opponent everywhere in the arena.
Bow	Bows are the most common missile weapons in Era of Eidolon and they often require high D ability scores. Your hero starts with the most basic bow as a default. All bows are two-handed weapons and cannot be used in combination with shields. All bows require LoS.
Bomb	Bombs are slightly different from the other types of weapons. A specific square must be targeted for the bomb to land in – your hero will always hit the intended square – and squares that are occupied by obstacles are not valid targets. Bombs do NOT require line of sight. Bombs have a blast radius of 1, meaning that they cause damage on the square they hit and all squares in base contact with that square. All heroes (including your own) within this radius are subject to the damage. Bombs often require high St ability scores.
TRAP	Traps differ from the other types of weapons in many ways. Mines are weapons that must be placed in a particular square with the "Place Mine" skill. The mine can only be placed in a square that the hero occupies. Once placed it will be triggered by any hero (including your own) stepping into the square with the mine. Mines cannot be placed in squares occupied by obstacles. Mines can be disarmed with the "Remove mine" skill. Traps often require high I ability scores.
Armour	Armour is a way to improve your hero's chances in the arena fights as it will reduce damage taken by hits from melee and missile attacks. The better the armour the less LP is lost to hits. Note that armour has no effect on damage caused by spells!
Shields	Shields will affect your hero's chances of avoiding getting hit by melee and missile attacks. To use a shield your hero must have at least one hand free, which means that two-handed weapons cannot be used in combination with shields. Note that if you equip your hero with a one-handed weapon and a shield is owned it will automatically be equipped. However, if you decide to change to a two-handed weapon the shield will no longer be equipped.
Charms	Charms are magical items that will provide your hero with an advantages that ordinary items can't offer.
ITEM CHARACTERISTICS	Items have the same characteristics as skills (see above).

Fighting

THE TURN CONCEPT Fights in the arena are executed in so-called turns and each turn consists of 3 phases and a possible reward phase if the fight ends for some reason (see below). Both players will be presented with each phase at the same time,

Situation overview In this phase of the turn you will see an updated display of the arena, including the position of your hero, the opponent's hero and all obstacles. Obstacles are put in the arena to provide cover and a tactical element. The situation overview will give you an idea of what actions (skills and spells) to choose in the next phase.

Choose actions In this phase both players choose the actions for a given turn. Since both players make their decisions at the same time it means that you will not know what your opponent does until the turn is played out in the result phase (see below). You have 20 seconds worth of time to choose your actions in – a so-called time limit. However, each action requires an amount of time and this will reduce the remaining time proportionally. I.e. if you don't choose any action for a turn you would have to wait for 20 seconds until the phase was over but for each action you make the time limit will be reduced by the relevant amount of seconds.

Results Once you and your opponent have submitted your actions (or the time limit is reached) they will be calculated and the result sent back for display on your phone in the result phase. This includes all movement, loss of LP, etc. Actions are terminated in the order they were chosen and in accordance with the time line. When all actions have been executed you will have to respond to a request to go on to the next turn or to the Reward phase (if the fight ended – see below).

Reward phase Any fight will end with this phase and it is here that you will receive information on how well you did in the fight and what rewards you are given (gold, respect, L%, charms, etc.). There are several ways for a fight to end as described below:

Flee A player flees the fight/leaves the game in some other way (including connection failure).

Defeat One of the heroes is defeated by being reduced to 0 LP. Note that once a fight is over all lost LP are fully regenerated!

No response A player does not respond to the request in the Results phase within 45 seconds

FIGHT RULES Fights follow certain "rules", which are listed below:

Movement All move actions are carried out according to the timeline in segments of 1 square at a time. Your hero cannot move diagonally. Your hero cannot end in squares which are occupied by other heroes (also applies to spells). Your hero cannot enter squares which are occupied by other heroes – the action is cancelled (also applies to spells). If you wish to enter the same square as your opponent then the hero with the fastest timeline outcome for the particular move action will occupy it - the other hero will remain in the last possible square (also applies to spells).

Melee skills In order for most melee skills to be able to affect the opponent your hero must be in base contact when the action is executed. Note that even though your

opponent may have been in base contact with your hero in the Situation Overview phase things may have changed – you or your opponent may have moved before the melee action is performed on the time line!

Missile skills Using missile skills require that your opponent isn't in base contact with your hero at the time the action is executed and that there is LoS to the opponent (the only exception is throwing bombs). Otherwise missile skills can affect the whole arena.

Hitting the opponent When trying to hit an opponent your hero's chance of success depends on several factors: how skilled he/she is with the relevant weapon, how high the D ability score is, and how good the opponent's total chance of avoiding a hit is. This will give a base chance for a successful hit. The computer then makes a random roll and if this lies within the base chance the attack will hit.

Spells Spells don't require the same to-hit procedures since they automatically hit the intended target. However, spells may be resisted by the opponent. To see if a spell is resisted the computer compares the caster's ability to cast the spell with the opponent's ability to resist it. if the caster's value is higher the spell isn't resisted.

Losing LP Whenever a skill action results in a hero losing damage, two things are taken into considering when measuring the amount of LP lost: the total effect of the skill, weapon and St ability score. This is the base effect. Secondly, if the random roll generated by the computer is low enough (meaning that the attack was very precise) the base effect is multiplied.

Defence skills It is important to note that defence skills can be chosen as early actions and still be effective against opponent's actions that are executed later on the timeline. Note that defence skills only come into action if the opponent makes an attack - If no attack is made the defence skill is wasted!

Obstacles Obstacles are objects that have been placed in the arena to provide heroes with a strategic element. There are several obstacle set-ups for the arena and for each fight a random set-up is chosen by the computer. The larger the type of obstacle is, the better it is at blocking LoS. Common to all obstacles is that the squares they occupy are invalid targets for any kind of action – this means that your hero cannot enter or move through a square with an obstacle in it or throw a bomb into the square.

Customising

In the home location it is possible for you to be a little bit creative with your hero as you may customise a few things:

Head When you create your hero he/she is automatically provided with a graphic for the head. However, since there are multiple heads to choose from you may decide to change the head for one of the others. This will allow players to have heroes that don't all look alike.

Taunts Taunts are a type of action that may be used in the arena. Taunts have no actual effect on how your hero performs in the fights but it is meant as a gimmick to enhance the game. Perhaps you may even provoke your opponent to do something that he/she wouldn't normally do!

Motto The motto of your hero is like a greeting and is used when you face an opponent that you have challenged (or that has challenged you). The motto has no effect on the game but works more or less like a taunt.

Clans

WHAT ARE CLANS? In Era of Eidolon it is possible for groups of players to join forces in so-called clans. A clan consists of a Chief and up to 29 normal members. Note that heroes can only join one clan at a time.

CLAN EVENTS All clans can participate in the clan events that start on the 1st of any month and ends on the 15th of the same month. The clan which has earned the most total respect in that period wins the clan event and receives in-game rewards for its efforts that will be distributed evenly amongst the clan members. The rewards may vary from event to event (e.g. gold, items, etc.). A clan member can only add respect to a clan when he is a member. A member who joins the clan in the middle of a period will only contribute from that point and onwards. Also, a clan member can at any time leave the clan. Any earned respect during a clan-event is lost to the clan.

NB! Clan members do not earn respect for the clan by fighting each other!

CREATING A CLAN Any player whose hero is not already in a clan may at any time create a new clan. That player's hero then becomes the Chief of the newly created clan. Other members can only join the clan if they have been invited by the Chief.

CLAN CHIEFS The clan chief is in many ways the most important hero of the clan. He/she was the one that created the clan in the first place and it is also the chief's job to enlist new members (or kick out old members) so that the clan thrives and may become strong enough to win the events. This can be time consuming and therefore the chief is rewarded with bigger shares of event prizes than the normal members.

Power Hour

WHAT IS POWER HOUR? Power hour is a weekly event that allows all players to compete for prizes. The goal of the Power Hour is to gain as much respect within one hour as possible. The player who has gained the most respect wins.
