CONTROLS

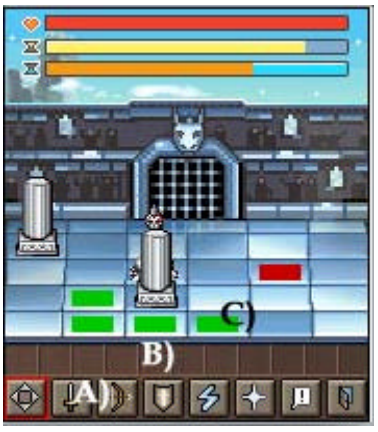

The Era of Eidolon game series uses the keys listed in the table below for gameplay controls. The numbers in parenthesis refer to the numbers in the picture of the phone on the right. However, note that the keys listed below aim at covering all phone models supported by the games and therefore you may not be able to use all the listed configurations on your phone).

Left Soft key (4)	Close pop ups; Accept choices;
Right Soft key (5)	Close pop ups; Cancel choices; Go Back; Decline fights
"Call" key (6)	End Turn in fights; view received challenges - when you have a new challenge you will see blinking swords (2);
Joystick/Arrow keys/ Navigation keys (7)	Navigate green town arrow (1); navigate menus; move marker in fights;
"End Call" key (8)	Close game (the game is automatically saved;
Number keys (9)	Navigate green town arrow (1); navigate menus; move marker in fights; enter text in input fields (marked with > in the menus)
*** key (10)**	View received challenges - when you have a new challenge you will see a blinking swords icon (2);
	When you have new mail in your Inbox you will see a blinking letter icon (3) - go to the Tavern/Inbox to read mail

FIGHTING IN THE ARENA

(See also "Fighting" p. 6).

When fighting in the Arena you must choose the actions you want to make for each Turn. The letters in parenthesis refer to the Arena screen on the right and the numbers still refer to the numbers in the picture of the phone.

Choosing actions: Choose one of the icons at the bottom of the screen (A) and Accept (4). This will bring up a menu of relevant actions. When you have selected one it will appear in the row above the icons (B).

Moving the Hero: To move your Hero in the Arena you have to create a path for your Hero to follow. Select the fields with Joystick (7), arrow keys (7) or number keys (9) – depending on what of phone model you have – and green dots will appear to show the path (C). If you are unhappy with your choice you can backtrack the path to delete it.

Bombs: A bomb works a bit differently that normal missile attacks. You have to select a target field for your bomb to land in (C – note that only one field will be marked and that the marker will be black instead of green). Use Joystick (7), arrow keys (7) or number keys (9) to move the marker to the field of your choice and then Accept (4).

YOUR HERO

Your Hero has several different attributes that will define him/her as can be seen below:

Name When you create your Hero you must decide on a name for him/her. The name may consist of any combination of letters and numbers so long as it fits within the input field. Note that each Hero name in the game must be unique so you cannot choose a name that has already been taken by another player!

Gender Your Hero can be either male or female – you are given the choice when you create your Hero. Note that gender has no effect on how your Hero performs in the game!

ABILITIES Your Hero has six different Abilities that each has an impact on how your Hero performs in the game. Each Ability score has a starting value of 15 but they will quickly get higher as your Hero advances in levels (see "Hero Progress" below). The Abilities are listed below along with a description of what they influence.

Strength (St)
- extra damage when using close combat weapons
- ability to use heavy items without movement and attack speed being impaired
- some skills and items require certain **St** Ability scores to be met before you can buy and use them

Intelligence (In)
- effect of Bane and Spectral spells
- some Bane and Spectral spells require certain **In** Ability scores to be met before you can buy and use them

Dexterity (Dx)
- chance of avoiding attacks made with weapons (not spells!)
- the chance of hitting a target with weapons
- the chance of making a critical hit (see below)
- some skills, spells and items require certain **Dx** Ability scores to be met before you can buy and use them

Toughness (To)
- number of Life Points (LP – see below for more details)

Speed (Sp)
- Speed affects how fast all actions are performed

Willpower (Wi)
- Reduces the cost of spells, skills and items
- chance of resisting hostile spells
- effect of Spirit and Guardian spells
- some skills, items and spells (Spirit and Guardian) require certain **Wi** Ability scores to be met before you can buy and use them

LEVEL Your Hero starts at level 0 and will gradually gain higher levels. There are 49 levels in the game, and each time your Hero gains a level he/she is rewarded with 2 Ability points that are used to raise Ability scores (see above). Note that Ability scores will increase faster at low levels than at high levels!

Next Level This is an indication of how close your Hero is to gaining a new level and is shown as a percentage (the higher the percentage the closer you are to a gaining a new level). Percentages are earned when winning fights in the Arena, and the amount depends on how challenging opponents are. Note that such gains can never be lost.

LIFE POINTS (LP) Life Points are a measurement of how much damage your Hero can take before losing a fight. Whenever a Hero reaches 0 **LP** the fight is lost. Note that **LP** are fully regenerated after each fight! **LP** are directly connected to the Toughness Ability (see above).

Weight Weight is an indicator of how much your Hero is carrying in terms of equipment (weapons, armour and possibly Charms). Of course, some items of a given type are heavier than others. The more weight your Hero is carrying, the slower he/she will move. Note that only the weight of equipped items affects your Hero's movement!

RESPECT Respect is an indicator of how well your Hero performs in the Arena fights. The better the score the better your Hero has fought. Note that Respect can be won AND lost, depending on whether you win or lose fights and on how challenging opponents are. E.g. if you defeat an opponent with a higher Level value you will gain more

Respect than if you defeat an opponent with a lower Level value. Note that you don't gain any Respect by defeating any of the Arena Gladiators as these are meant as an opportunity for you to train your playing skills!

Title Each skill and spell your Hero knows has a number of titles tied to them that indicate how good he/she is at using them. The titles are as follows:

Fumbler	This is the most basic level a Hero can have in a skill or spell
Beginner	-
Trained	-
Experienced	-
Master	-
Expert	-
Sensei	When your Hero obtains this title he/she can't advance any further with that particular skill or spell.

The higher title you have with a skill or spell, the better the effect is and the faster you are at using them.

Promotion This is an indicator in percentages of how close your Hero is to reaching the next title with a skill or spell.

GOLD Gold is the monetary value of the game and may be used for buying items, skills and spells. You can earn Gold in fights and by participating in the contests that take place on a regular basis.

Clan If your Hero has joined (or created) a Clan this will be indicated by a Clan name. Clans will be described in further detail below.

SKILLS

Skills cover a broad group of actions that your Hero can make during fights. Skills are divided into 4 categories, which are described below:

Move All skills that are related to moving your Hero around in the Arena and removing traps (traps will be explained under weapons) fall into this category. Your Hero starts with the most basic move skill, but more advanced skills will be available as the Hero improves.

Close Combat Whenever you wish to make an attack with a close combat weapon or place a trap, you must use a close combat skill. Your Hero starts with the most basic close combat skill, but more advanced skills will be available as the Hero improves.

Ranged Attack Ranged attack skills allow your Hero to make ranged attacks, including throwing bombs. Your Hero starts with the most basic ranged attack skill, but more advanced skills will be available as the Hero improves.

Defence Defence skills will improve your Hero's chances of surviving a fight. Your Hero starts with the most basic defence skill, but more advanced skills will be available as the Hero improves.

SKILL CHARACTERISTICS Below are some characteristics that define skills:

Name This is the name of the skill.

Description The description of a skill will tell you what the skill does and how it is used.

Ability requirements Skills may have requirements to Ability scores and this is listed with the relevant Ability followed by a number (e.g. St 18 meaning that your Hero must meet a requirement of Strength 18). Your Hero must have that score in the listed Ability in order to buy and use the skill. If your Hero doesn't meet a requirement for a given skill, spell or item it is marked with a minus symbol (note that if your Hero has too little Gold to buy the given thing it is also marked this way).

Time (Ti) All skills take a certain amount of time to perform and this is indicated by the Ti value. Note that this is not the total time used if weapons are used in combination with the skill.

Effect The effect of a skill indicates how powerful the skill is and is directly related to the description. For instance a skill description will say that the skill is used for making a dodge (a defence skill), and the effect value will then tell you how good that skill is. The higher the effect the better the skill is.

SPELLS

Spells are mental manifestations that may give your Hero the power to affect him/her and/or opponents. Although similar to skills, spells never require the use of weapons or other items to be used. All spells fall into one of the following categories:

INTELLIGENCE BASED

- **Spectral** This category includes a wide variety of spells, including move related spells.
- **Bane** This category contains spells that cause damage or in others ways affects the opponent negatively.

WILLPOWER BASED

- **Guardian** Guardian spells will help your Hero avoid attacks, reduce damage taken and even reflect spells back at an opponent.
- **Spirit** The spells in this category are used to boost your Hero, e.g. by healing lost Life Points.

SPELL RULES Spells follow certain "rules", which are listed below:

Resisting Spells that target another Hero can be resisted, which means that the spell will have no effect.

Success Rate Spells can't fizzle because the caster is hit by an attack. However, some spells are not stable enough to have a reliable outcome and may thus fizzle – they have a so-called success rate. Otherwise, spells count as always being cast but may still be resisted by the opposing player, of course!

Always hit Unlike skills, spells don't require to-hit rolls and thus count as always hitting the target if the appropriate conditions have been met (Line of Sight, not resisted, etc.).

Use of hands Spells are cast through the use of your Hero's mind and therefore don't require the use of hands. Your Hero can be equipped with weapons and still be able to cast spells.

Line of Sight (LoS) All spells, except movement spells from the Spectral category, that target the opponent require Line of Sight. LoS may be blocked by obstacles that are placed in the Arena.

SPELL CHARACTERISTICS Spells have the same characteristics as skills (see above).

ITEMS

The items of the game will play an important role in improving your Hero's chances of winning fights. Items are divided into the following categories:

CLOSE COMBAT WEAPONS Close combat weapons are those used in close combat and as a result all close combat weapons have a range of 1, meaning that in order to hit an opponent the two Heroes must be in contact with each other. All close combat weapons require **LoS**.
Swords The sword is the most common type of close combat weapon in Era of Eidolon. Your Hero starts with the most basic sword as a default, but more powerful weapons from all classes will become available as your Hero advances. Swords often require high **Dx** Ability scores. Swords are generally fast weapons but don't cause as much damage as axes and hammers.

Axes Axes are somewhat of a blend between swords and hammers in terms of damage potential and time. Axes often require high **Dx** and **St** Ability scores.

Hammers Hammers are brutal close combat weapons, which often require high **St** Ability scores. Because hammers are so unwieldy they are slow to use but as compensation they generally have the highest damage potential.

Traps Traps differ from the other types of weapons in many ways. Traps are weapons that must be placed in a particular field with the "Place Trap" skill. The trap can only be placed in a field that the Hero occupies. Once placed it will be triggered by any Hero (including your own) stepping into the field with the trap. Traps can't be placed in fields occupied by obstacles. Traps can be disarmed with the "Remove trap" skill or ignored with the "Tip Toe" skill. Traps often require high **In** and **Dx** Ability scores. Note also that a field can only contain one trap! This means that a trap placed in a field already containing one will replace the old trap.

RANGED ATTACK WEAPONS All ranged attack weapons have a range that can potentially affect an opponent everywhere in the Arena.

Bows Bows are the most common ranged attack weapons in Era of Eidolon and they often require high **Dx** Ability scores. Your Hero starts with the most basic bow as a default. All bows require **LoS**.

Bombs Bombs are slightly different from the other types of weapons. A specific field must be targeted for the bomb to land in – your Hero will always hit the intended field. Fields that are occupied by obstacles are not valid targets. Bombs do NOT require line of sight. Bombs often require high **St** Ability scores.

ARMOUR Armour is a way to improve your Hero's chances in the fights as it will reduce damage taken by hits from close combat and ranged attacks. The better the armour the less **LP** is lost to hits. Note that armour has no effect on damage caused by spells!

MAGIC ITEMS Magic items are will provide your Hero with advantages that ordinary items can't offer. Magic items are divided into those that resemble normal gear (weapons and armour) and Charms. Magic items cannot be bought but must be won in game contests. (See also "Equipping the Hero" p. 8).

ITEM CHARACTERISTICS Items have the same characteristics as skills (see above).

FIGHTING

(See also "Fighting in the Arena" p. 2).

THE TURN CONCEPT Fights in the Arena are executed in so-called turns. Each turn consists of 3 phases. Both players will be presented with each phase at the same time.

Situation overview In this phase of the turn you will see an updated display of the Arena. This includes the position of your Hero, the opponent's Hero and all obstacles. Obstacles are put in the Arena to provide cover and act as tactical elements. The situation overview will give you an idea of what actions (skills, spells, etc.) to choose in the next phase.

Choose actions In this phase both players choose the actions for a given turn. Since both players make their decisions at the same time, it means that you will not know what your opponent does until the turn is played out in

the result phase (see below). You have a certain amount of seconds to choose your actions in – a so-called time limit. However, each action your Hero performs requires an amount of time and this will reduce the remaining time proportionally. You can see how much time remains of the time limit by watching the yellow time line bar.

Results Once actions have been submitted (or the time limit is reached) they will be calculated and the result sent back for display on your phone in the result phase. This includes all movement, loss of **LP**, etc. Actions are terminated in the order they were chosen and in accordance with the time line. When all actions have been executed you will go on to the next turn or to the Reward phase (if the fight ended – see below).

Battle Report Any fight will end with this phase, and it is here that you will receive information on how well you did in the fight and what rewards you are given (Gold, Respect, Next Level gain, etc.). There are two ways for a fight to end as described below:

- **Flee** A player flees the fight/leaves the game in some other way (including connection failure).
- **Defeat** One of the Heroes is defeated by being reduced to 0 **LP**.

FIGHT RULES Fights follow certain "rules", which are listed below:

Movement
- All move actions are carried out according to the time line in segments of 1 field at a time.
- Your Hero can't move diagonally.
- Your Hero can't end in or enter fields which are occupied by other Heroes (also applies to spells) – the action is cancelled and you will get a "Failed Move" fight text.
- If you wish to enter the same field as your opponent then the Hero with the fastest time line outcome for the particular move action will occupy it - the other Hero will remain in the last possible field (also applies to spells).

Close combat skills
- To use close combat skills (except Place Trap), your Hero must be in base contact when the action is executed. The Arena fight text will indicate if an attack can't be made because the opponent is too far away.
- You cannot perform close combat skills without the proper weapons equipped (e.g. you need a melee weapon to use the "hit" skill)!

Ranged attack skills
- You cannot use ranged attack skills if you are in base contact with your opponent. The Arena fight text will indicate if an attack can't be made because the opponent is too close.
- Ranged attack skills require LoS to the opponent (the only exception is throwing bombs).
- Ranged attack skills have a range that can affect the whole Arena.
- You cannot perform ranged attack skills without the proper weapons equipped (e.g. you need some type of bow to use the "shoot" skill)!

Hitting the opponent When trying to hit an opponent, your Hero's chance of success depends on how high the **Dx** Ability score is, and how good the opponent's total chance of avoiding a hit is. This will give a base chance for a successful hit. The computer then makes a random roll and if this lies within the base chance the attack will hit.

Spells Spells don't require the same to-hit procedure since they automatically hit the intended target. However, spells may be resisted by the opponent. To see if a spell is resisted the computer compares the caster's ability to cast the spell with the opponent's ability to resist it. If the caster's value is higher the spell isn't resisted.

Losing LP Whenever a skill action results in a Hero taking damage, two things are taken into considering when measuring the amount of LP lost: the total effect of the skill, weapon and **St** Ability score. This is the base effect. Secondly, if the random to-hit roll that the computer generates is good (precise) the base effect is multiplied. On rare occations the to-hit roll will be so good that a critical hit is made. Such hits truly hurt!

Defence skills It is important to note that defence skills can be chosen as early actions and still be effective against opponent's actions that are executed later on the timeline. Note that defence skills only come into action if the opponent makes an attack. If no attack is made the defence skill is wasted!

Obstacles Obstacles are objects that have been placed in the Arena to provide Heroes with a strategic element. There are several obstacle setups for the Arena and for each fight a random setup is chosen by the computer. The larger the type of obstacle is, the more **LoS** it blocks. Common to all obstacles is the fact that the fields they occupy are invalid targets for any kind of action – this means that your Hero can't enter or move through a field with an obstacle or throw a bomb into the field.

Gladiator Fights It is possible to fight in singleplayer mode in the Arena. The opponent in such fights is one of the many computer controlled Gladiators. Gladiator fights are executed just like normal fights. The Gladiators are ranked according to their level and the lowest ranking Gladiator must be defeated before the next can be challenged. Note that only Gold and Next Level gain can be earned when winning over a Gladiator!

HERO PROGRESS

During play you will see that there are many ways for your Hero to progress. Common to all of them is that what you gain, and how much you gain depends on the fights you win:

- Each time your Hero gains a new level you receive 2 Ability points with which you can raise Ability scores.
- When you defeat one of the Gladiators, you will gain Gold and Next Level rewards.
- If you fight against another member of your own Clan, neither of you will win nor lose anything!
- Each subsequent fight you make against the same opponent within a 7 day period will earn you less per fight won.
- If you win over an opponent of higher level you will gain more than if you win over an opponent of lesser level.
- If you lose a fight you can only lose Respect.

CUSTOMISING

In the Home location it is possible for you to be a little bit creative with your Hero as you may customise a few things:

Head Your Hero is automatically provided with a graphic for the head upon creation. However, since there are multiple heads to choose from, you may decide to change the head to one of the others.

Taunts Taunts are a type of action that may be used in the Arena. Taunts have no actual effect on how your Hero performs in the fights but it is meant as a gimmick to enhance the game.

Motto The motto of your Hero is like a greeting and is used when you face an opponent that you have challenged (or that has challenged you) and when a fight ends. The motto has no effect on the game but works more or less like a taunt.

EQUIPPING THE HERO

Sometimes you may want to change the setup for what your Hero uses in the Arena. You can do this in the Home location under Equip. here you will see the six categories of items to equip:

Melee This category contains all the weapons that are used in close combat, i.e. swords, hammers and axes. Magic melee weapons are also equipped here if your Hero gains access to such items.

Trap You hero doesn't start with any traps as they require Ability scores that are too high for a starting Hero to meet. Magic traps are also equipped here if your Hero gains access to such items.

Bow This category contains all types of bows. Magic bows are also equipped here if your Hero gains access to such items.

Bombs You hero doesn't start with any bombs as they require Ability scores that are too high for a starting Hero to meet. Magic bombs are also equipped here if your Hero gains access to such items.

Armour This category contains all kinds of armour. Magic armour is also equipped here if your Hero gains access to such items.

Magic This category contains the Charms that can be won in the Blood Duels.

When you create your Hero, it by default starts with the basic items equipped for the Melee, Bow and armour categories. However, whenever you buy new weapons or suits of armour they will be equipped automatically. Old items will be unequipped but are still available. To equip an item simply move the shaded line to the item and Accept.

You can also un-equip all items in a category. Simply select "Unequip all" and Accept. This can be useful if you want to increase your movement speed as only the weight of equipped items is taken into consideration when calculating your movement rate. However, you should note that you can't perfo rm any close combat skills without a melee weapon equipped, make any long range skills without a bow or bomb equipped, etc.! (See also "Skills" p.4).

NB! Note that you can only have one of each type of item equipped at a time (close combat weapon, bow, trap, bomb, armour) and the same goes for Charms if you are lucky enough to have won more than one!

CLANS

In Era of Eidolon it is possible for groups of players to join forces in so-called Clans. A Clan consists of a Chief and up to 19 normal members. Note that Heroes can only join one Clan at a time. Since the Clan acts like a small community within the world of Eidolon, Clan members do not gain anything by fighting amongst themselves.

Clan Wars All Clans can participate in the Clan Wars that start on the 1st of any month and end on the 7th of the same month. The Clan that has earned the most total Respect in that period wins the Clan Wars and receives Gold rewards for its efforts. The Gold will be distributed evenly amongst the Clan members. A Hero can only add Respect to a Clan when he/she is a member. A Hero who joins the Clan in the middle of a period will only contribute from that point and onwards. Also, a Clan member can at any time leave the Clan. Any earned Respect of leaving Clan members during a Clan event is lost to the Clan.
NB! Clan members do not earn Respect for the Clan by fighting each other as noted above!

Creating a Clan Any player, whose Hero is not already in a Clan, may create a new Clan once level 10 is reached. The Hero then becomes the Chief of the newly created Clan. Other members can only join the Clan if they have been invited by the Chief. Clans can only be created at the website www.eraofeidolon.com – follow the "My Account" link and log in with your Nickname and Password (the same as those you use on the phone). Here you will see the "Create Clan" link; just follow the instructions given here.

Clan Chiefs The Clan Chief is in many ways the most important Hero of the Clan. It is the Chief's job to enlist new members, or kick out old members so that the Clan thrives and may become strong enough to win the contests. This can be time consuming and therefore the Chief is rewarded with 10% bigger shares of contest prizes than the normal members. Note that a Clan Chief may transfer the leadership to another member of the Clan. This can be done at the website by following the "My Account" and "Modify Clan" links.

BLOOD DUELS

Blood Duels are weekly contests that allow all players to compete for prizes. Blood Duels are held at Wednesdays, but note that Blood Duels only take place when there are no Clan Wars! The goal of a Blood Duels session is to gain as much Respect within three hours as possible. The player who has gained the most Respect wins. Unlike the Clan Wars where the reward is a Gold prize, the prize in the Blood Duels is a magic item.

SUPPORT
